

METHODS FOR TREATING AN ISCHEMIC DISORDER AND IMPROVING STROKE  
OUTCOME

5 Abstract of the Disclosure

10 The present invention provides for a method for treating an  
ischemic disorder in a subject which comprises administering to the  
subject a pharmaceutically acceptable form of a selectin antagonist  
in a sufficient amount over a sufficient time period to prevent  
white blood cell accumulation so as to treat the ischemic disorder  
in the subject. The invention further provides a method for  
treating an ischemic disorder in a subject which comprises  
administering to the subject carbon monoxide gas in a sufficient  
15 amount over a sufficient period of time thereby treating the  
ischemic disorder in the subject. The invention further provides  
a method for treating an ischemic disorder in a subject which  
comprises administering to the subject a pharmaceutically  
acceptable form of inactivated Factor IX in a sufficient amount  
20 over a sufficient period of time to inhibit coagulation so as to  
treat the ischemic disorder in the subject.
